IRONHACK CAPSTONE ·

ROUND 1

AI-assisted preparation for remote photographers

IRONHACK CAPSTONE · ROUND 1

Marija Kavaliauskaite

Working prototype · commercial journey in progress

Remote shoots fail before the camera turns on

RESEARCH SYNTHESIS

Clients often arrive uncertain about the process, practical setup and creative direction. The photographer repeats the same preparation work in messages and calls.

MIRA

MAKING MIRA OBSERVABLE

LangSmith monitors how MIRA transforms client preparation into Creative DNA.

3 FICTIONAL TESTS

Fashion founder · Musician · Ceramic artist

MONITORED

Success · relevance · completeness · invented details · response time · token cost

WHY

Problems become visible before the photographer approves the creative direction.

TOOLS · LangSmith · OpenAI · TypeScript · synthetic data · human review

Remote shoots fail before the camera turns on

RESEARCH SYNTHESIS

MIRA

FOR REMOTE PHOTOGRAPHERS

Better shoots begin before the camera turns on.

Remote photography is still new. Clients often do not understand how it works, what they need to prepare or what it will feel like to be photographed through their phone.

MIRA prepares your client for the remote shoot, so you can arrive with shared direction, fewer loose ends and more space for the photographs that matter.

[Prepare your next shoot →](#)

"Remote photography? How does that work?"

Payment now opens the photographer journey

BROWSER-VERIFIED

A €0 promotion-code checkout returned to MIRA, confirmed access and routed the authenticated photographer into onboarding. The commercial path was tested without charging real money.

MIRA

WHAT I USED — AND WHY

TOOLS USED · Manus · Stripe · Resend · Cloud deployment

I used Manus for the environment-dependent parts of MIRA:

- Deploying the application to the existing cloud preview
- Configuring Stripe checkout and verifying the payment webhook
- Configuring Resend and confirming email delivery
- Managing secure environment variables
- Connecting the persistent database and stored assets
- Testing the complete workflow in a live browser environment

Why: These features require a live server, secure credentials, webhooks, persistent data and public URLs. They cannot be fully verified through local code alone.

FROM PURCHASE TO READY TO SHOOT

01 · PHOTOGRAPHER BUYS MIRA

Stripe securely completes the one-time purchase and activates access.

02 · PHOTOGRAPHER CREATES THE SHOOT

The photographer enters the client, date, location, purpose and preparation details.

03 · RESEND DELIVERSS THE INVITATION

The client receives a branded email containing one private Shoot Room link.

04 · CLIENT ENTERS THE PRIVATE ROOM

The client reviews the shoot details, accepts the invitation and begins preparation.

PHOTOGRAPHER DASHBOARD

Your shoots.

One shared preparation flow, from client invitation to READY TO SHOOT.

PHOTOGRAPHER NOTES

Create shoot

YOUR SHOTS

Open an active shoot or create the next one.

0 active

No shoots yet. Create the first one when you are ready.

BILLING

MIRA Studio · €333 one-time

Status: Not active

Photographer brief + client conversation + visual references → structured memory → Creative DNA → five-scene moodboard → preparation brief
The tool was not a separate external research platform.

It was built into MIRA using:

React/TypeScript · server API · persistent database · structured memory · MIRA master prompt and visual-style pipeline

05 · MIRA COLLECTS CREATIVE CONTEXT

Through text—and eventually voice—MIRA gathers goals, references, practical constraints and visual preferences.

06 · MIRA PREPARES THE SHOOT

The information becomes Creative DNA, five moodboard scenes and photographer-ready preparation.

ONE CONNECTED WORKFLOW

Stripe → Photographer dashboard → Resend invitation → Private Shoot Room → Creative DNA → Moodboard → Ready to Shoot

Small status note:

LIVE-VERIFIED · Stripe checkout · Resend delivery · Private Shoot Room · Five references · Five-scene demo moodboard

The client journey reaches preparation and calendar

BROWSER-VERIFIED

WORKING Payment → dashboard → shoot → private Shoot Room

VERIFIED Google Calendar · date, location + one-day reminder

RESEND KEEPS THE CLIENT CONNECTED

BOOKING / SHOOT CREATED

Confirmation email introduces the shoot and includes the private MIRA Shoot Room link.

7 DAYS BEFORE

Preparation begins: the client opens MIRA, shares preferences and uploads visual references.

3 DAYS BEFORE

MIRA reminds the client to complete the conversation and review the developing creative direction.

1 DAY BEFORE

Final readiness check: time, location, wardrobe, lighting, phone battery, storage and shoot plan.

SHOOT DAY

A short reminder provides immediate access to the Shoot Room and final preparation details.

1 DAY AFTER

The client can revisit the Shoot Room for one final day. Access then expires to protect the private preparation space.

Resend email → secure private link → MIRA conversation → Creative DNA → moodboard → preparation plan → READY TO SHOOT

Add this accuracy label:

LIVE-VERIFIED · Branded invitation delivery and delivery webhook

DESIGNED WORKFLOW · Scheduled reminders and automatic post-shoot expiry

MIRA stays one link away - available whenever the client needs reassurance, guidance or a reminder before the shoot.

Every Resend email returns the client to the same private Shoot Room, preserving the conversation, references and preparation progress.

MIRA COLLECTS CREATIVE CONTEXT

The client adds her photographs, references and personal story.

MIRA combines them with the photographer’s brief and Maria’s Visual Direction Skill to create five connected editorial scenes not generic AI images.

The client recognises herself before the shoot begins.

LIVING PRECISION

Warm architecture · tailored movement

PRECISION IN STILLNESS

Athletic geometry · electric blue

INTERNAL AI-ASSISTED TESTING

5 synthetic test cases · 0 technical failures · 4.2/5 automated score

This was a development check using an LLM-as-a-judge. Formal user and photographer evaluation is still pending.

INTERNAL AI-ASSISTED TESTING

COST + TIMELINE

MIRA PRICE

€33.33/month per photographer

RUNNING COSTS

OpenAI usage · Resend emails · hosting · database/storage · Stripe fees

TIMELINE

POC completed · Pilot: 2–4 weeks · Production-ready version: 4–8 weeks

Small note:

Estimates depend on active photographers, number of shoots, conversation length and image generation.

This was a development check using an LLM-as-a-judge. Formal user and photographer evaluation is still pending.

MIRA

Better shoots begin before the camera turns on.

Next proof point: one reliable path from photographer account to prepared client brief.
